Pl library location: 67-43.
* arbitrary. Gaps between the contigs are represented as 
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number wil
* be preserved.
                                                                                                         Submitted (23-FEB-1999) Genome Sequencing Center, Washington University School of Medicine, 4444 Forest Park Parkway, St. MO 63108, USA
On Mar 1, 1999 this sequence version replaced gi:4263152.
* NOTE: This is a 'working draft' sequence. It currently
* consists of 13 contigs. The true order of the pieces
* is not known and their order in this sequence record is
                                                                                                                                                                                                                                                    Direct Submission

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Direct Submission

Submitted (23-FEB-1999) Genome Sequencing Center, Washington University School of Medicine, 4444 Forest Park Parkway, St. Lou Mo 63108, USA
On Mar 1, 1999 this sequence version replaced g1:4263140.
* NOTE: This is a 'working draft' sequence. It currently consists of 30 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Waterston, R.H

NOTE: This is a 'working draft' sequence. It currently
consists of 36 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                     unordered

NOTICE: This sequence may not be the entire insert of this clone. It may be shorter because we only sequence overlapping sections once, or longer because we provide a small overlap between neighboring submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded or sequenced with an alternate chemistry; an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone

NEIGHBORING COSMID INFORMATION

```
The 5' cosmid is Y48G8A;3' cosmid is GAPlarm_65, 200 bp overlap. Actual start of this cosmid is at base position 1 of CELK12C11; actual end is at 40479 of CELK12C11

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Current sequence finishing criteria for the C. elegans genome sequencing consortium are that all bases are either sequenced unambiguously on both strands, or on a single strand with both a dye primer and dye terminator reaction, from distinct subclones. Exceptions are indicated by an explicit note.

IMPORTANT: This sequence is NOT necessarily the entire insert of the specified clone. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small coverlap between neighbouring submissions.

This sequence is the entire insert of clone KOBE3. The true right end of clone WOGF12 is at 467 in this sequence. The start of this sequence (1. 105) overlaps with the end of sequence ZB3244.

The end of this sequence (39514. 39565) overlaps with the start of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         jes@sanger.ac.uk or rw@nematode.wustl.edu

It currently consists of I contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

NOTE: This is a 'working draft' sequence. It currently consists of 2 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            as soon as it is available and the accession number be preserved.

PT Polypeptides comprising immunogenic portions of prostate proteins -
PT used in a vaccine for the treatment of prostate cancer
PS Claim 3; Page 85; 130pp; English.

CC The present sequence is a new DNA which encodes an immunogenic portion
CC of a prostate tumour protein. The encoded immunogen, or the DNA itself,
CC can be used as a vaccine for the treatment of prostate cancer. The DNA
CC was identified by analysis of a subtracted CDNA library obtained by
CC subtracting a prostate tumour CDNA expression library with a normal
CC tissue cDNA library.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel human prostate specific tumour protein and fragments - useful for detecting and treating prostate cancers claim 1; Page 100; 141pp; English.

This sequence represents a human prostate tumour specific gene, and car be used in the method of the invention. The method is for detecting prostate cancer comprises contacting a biological sample with an agent able to bind an immunogenic portion of a prostate protein (such as encoded by this sequence). An antibody which binds to an immunogenic portion of the prostate protein, and the method can be used to detect, monitor progression of, or treat prostate cancers. The antibody may also be conjugated to a therapeutic agent for use in therapy of prostate
                                              Polypeptides comprising immunogenic portions of prostate proteins - used in a vaccine for the treatment of prostate cancer Claim 3; Page 94; 130pp; English.

The present sequence is a new DNA which encodes an immunogenic portion of a prostate tumour protein. The encoded immunogen, or the DNA itself. can be used as a vaccine for the treatment of prostate cancer. The DNA was identified by analysis of a subtracted CDNA library obtained by the process of the control of the treatment of prostate cancer.
                                                                                                                                                                                                                                            (CORI-) CORIXA CORI

PS Claim 1; Page 584-590; 3271pp; English.

This sequence represents one of 5191 Staphylococcus aureus DNA sequences of the invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using the S.aureus DNA sequences allows putative functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S.aureus infection. The polypeptides can also be used in a kit for the immunodetection of S.aureus in a sample. S.aureus is implicated in numerous human diseases, including cellulitis, eyelid infections, food poisoning, osteomyelitis, skin and surgical wound infections, scalded skin syndrome, toxic shock syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences (and their fragments) are useful as priners or probes for isolating community readable medium.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New recombinant protein with endo chitinase activity - also DNA encoding it and plants which express it, resistant to fungi, insects, bacteria and nematodes.

Example: Fig 2; 82pp; French.

The inventors claim a new recombinant gene which codes for a protein with encochitinase activity, or its precursor (see 021007). The coding part of the gene contains at least the 5' part of DNA for tomato endochitinase and at least the 3' part of DNA for the tobacco enzyme (DNA can be genomic or cDNA, but at least one intron is pref. present). The recombinant gene includes the 35 promoter of cauliflower mosaic virus plus the terminator from the nopaline synthase gene of Agrobacterium tumefaciens.

The present invention describes a DNA molecule encoding a pathogenesis-related (PR) protein having beta-1,3-glucanase activity selected from PR-2, PR-2', PR-N, PR-O', Also described are: (1) a chimeric gene comprising the above DNA molecule linked to a heterologous promoter; (11) a vector containing the chimeric gene; (11) a host cell containing the chimeric gene; (11) a transgenic plant containing the chimeric gene; (10) a transgenic plant. The DNA molecule is used to produce transgenic plants with enhanced disease or pest resistance. The present sequence represents a tobacco basic beta-1,3-glucanase genomic DNA sequence.

```
CC fragment from the 5' flanking region of a chemically regulatable DNA promoter CC a plant tissue. The method allows isolation of sequences which will be CC useful for the controlled expression of genes, under the control of a CC non-coding regulatable sequence. This is useful in plants with a CC chemical regulator, the regulator being applied before or with the CC chemical regulator, the regulator being applied before or with the CC chemical regulator being applied before or with the CC is useful for controlling sequences which encode traits such as CC height, shape, development, male or female sterility, and the ability CC of the plant to withstand cold, heat, salt and drought. The chemical induction of the promoter allows the regulation of production of compounds, e.g. flavours, fragrances, pigments, natural sweeteners, CC industrial feedstocks, antimicrobials and pharmaceuticals, by CC biosynthesis or metabolite conversion, whose biosynthesis is controlled by endogenous or foreign genes. The method allows control over the time CC and rate of gene expression either throughout the whole plant, or in CC instance dusting the leaves with the chemical regulator. Controlling the developmental processes by the application of a regulating chemical in CC a given time. Flower formation and fruit ripening to be synchronised at a given time.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RESULT 1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence represents a clone of the tobacco beta-1,3-glucanass. This gene can be isolated using the method of the invention. The method is for isolating a chemically regulatable DNA promoter fragment from the 5' flanking region of a chemically regulatable of the state of the sequence of the sequen

The DNA sequences are recorded on a computer readable confit the invention. The DNA sequences are recorded on a computer readable confit the invention. The DNA sequences are recorded on a computer readable confit the saureus DNA sequences allows putative functions to be assigned so contain protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are confidently to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S.aureus infection. The polypeptides can also be used in a kit for the immunodetection of concluding cellulitis, eyelld infections, food poisoning, osteomyelitis, skin and surgical wound infections, scalded skin syndrome, toxic shock concluding cellulitis, eyelld infections, scalded skin syndrome, toxic shock concluding cellulitis, eyelld infections, scalded skin syndrome, toxic shock concluding cellulitis, and infections, scalded skin syndrome, toxic shock concluding cellulitis, and infections, scalded skin syndrome, toxic shock concluding cellulitis, and infections. The DNA sequences can be used concept the saureus DNA sequences can be used computer readable medium.

restriction and other properties. The invention and other cancers - using MAGE-R cluster DNA sequence. The invention provides a novel method for screening for the possibility of a testicular seminoma, concernmental in a sample. The method comprises contacting the sample with the at least one nucleic acid molecule which hybridises to mRNA corresponding to an MAGE-Xp gene, and determining hybridisation as a determination of comprises contacting the sample with method comprises contacting the sample with contained maker and control of the sample with hybridises to mRNA corresponding to an MAGE-Xp gene, and determining hybridisation as a determination of comprises contained which hybridises to mRNA corresponding to an MAGE-Xp gene, and determining hybridisation as a determination of melanoma, breast cancer, sarcoma, or leukaemia in the sample. By assaying for the MAGE-B1 gene, or MAGE-B gene, both contained within this 40352 completed that encodes the presence of such cancers in a sample can be determined. The genomic DNA that encodes the MAGE-B2 gene consists of nucleotides 3266-7979 of this MAGE-B cluster DNA sequence. The nucleic acid molecule that encodes a MAGE-B1 gene, consists of, in CC 5' to 3' order, nucleotides 31403-31474, 33958-34062, and 38088-39691, and mucleotides 335057-35139 and 38088-39691, and nucleotides 3358-34062 and 38088-39691 of this sequence. The primers specific for the MAGE-B cc gene can be used in a kit to amplify a MAGE-B gene.
                                                                                                                                                                                                                                                                                  W09746710-A1.

                                                                                                                                                                                                                                                                                                      New yeast of controlled activation at low temperatures - useful for improving the quality of dough claim 5; Page 21-22; 41pp; Japanese.

The present sequence represents a protein phosphatase gene sequence of Saccharomyces cerevisiae. The specification describes new secrevisiae in which the growth and/or the fermentation activity is controlled at least in the range of 0-20 degrees Celsius. These yeast are prepared by deleting the function of at least one protein phosphatase gene. The yeast is useful in the production of dough. Sequence 1407 BP; 434 A; 222 C; 325 G; 426 T;
